AMENDMENTS TO THE CLAIMS

This Listing of Claims will replace all prior versions, and listings, of claims in this application:

Listing of Claims:

1. (Cancelled)

2. (Currently Amended) A method for efficient processing of a document encoded in a markup language, the method comprising the step of: communicating a data model representing the document through a bus of a printed circuit board from a special purpose processor configured for processing the document encoded in the markup language, to a general purpose processor configured for further processing of the encoded document as processed by the special purpose processor, each of said special purpose processor and said general purpose processor being provided as a respective integrated circuit on said printed circuit board. The method of claim 1, wherein said data model represents a document encoded in mXML.

3. (Currently Amended) The method of claim 4 2, wherein said data model represents a document encoded in XML.

4. (Cancelled)

5. (Cancelled)

U.S. Application No. 09/848,828 (Conf. No. 7479)
Reply to Office Action dated June 29, 2005

RSW9-2001-0077-US1

6. (Currently Amended) The method of claim 4 claim 7, wherein said processing step comprises performing a transformation on the document.

7. (Currently Amended) A method for efficient processing of a document encoded in a markup language, the method comprising the steps of:
receiving a document intended for delivery to a target;
processing the document using a special purpose processor dedicated to
processing of documents encoded in the markup language, said special purpose
processor being provided as a first integrated circuit on a printed circuit board; and
passing, by communicating through a bus of a printed circuit board, the processed
document to the target for further processing by a general purpose processor including
a microprocessor that is provided as a second integrated circuit, separate from the
special purpose processor, on the printed circuit board The method of claim 4, wherein
said processing step comprises creating an array-based model of the document.

8. (Currently Amended) A method for efficient processing of a document encoded in a markup language, the method comprising the steps of:
receiving a document intended for delivery to a target;
processing the document using a special purpose processor dedicated to
processing of documents encoded in the markup language, said special purpose
processor being provided as a first integrated circuit on a printed circuit board; and

Reply to Office Action dated June 29, 2005

RSW9-2001-0077-US1

passing, by communicating through a bus of a printed circuit board, the processed document to the target for further processing by a general purpose processor including a microprocessor that is provided as a second integrated circuit, separate from the special purpose processor, on the printed circuit board ~~The method of claim 4, wherein said processing step comprises creating a tree-based model of the document.~~

9. (Currently Amended) A method for efficient processing of a document encoded in a markup language, the method comprising the steps of:
receiving a document intended for delivery to a target;
processing the document using a special purpose processor dedicated to processing of documents encoded in the markup language, said special purpose processor being provided as a first integrated circuit on a printed circuit board; and
passing, by communicating through a bus of a printed circuit board, the processed document to the target for further processing by a general purpose processor including a microprocessor that is provided as a second integrated circuit, separate from the special purpose processor, on the printed circuit board ~~The method of claim 4, wherein said special purpose processor is specially configured for parsing the document.~~

10. (Currently Amended) A method for efficient processing of a document encoded in a markup language, the method comprising the steps of:
receiving a document intended for delivery to a target;

U.S. Application No. 09/848,828 (Conf. No. 7479)
Reply to Office Action dated June 29, 2005

RSW9-2001-0077-US1

processing the document using a special purpose processor dedicated to
processing of documents encoded in the markup language, said special purpose
processor being provided as a first integrated circuit on a printed circuit board; and
passing, by communicating through a bus of a printed circuit board, the processed
document to the target for further processing by a general purpose processor including
a microprocessor that is provided as a second integrated circuit, separate from the
special purpose processor, on the printed circuit board. The method of claim 4, wherein
said special purpose processor comprises a supplemental general purpose
microprocessor for executing computer readable code for parsing the document, said
supplemental general purpose microprocessor being distinct from a primary general
purpose microprocessor.

11. (Currently Amended) The method of ~~claim 4~~ claim 9, wherein said
passing step comprises communicating the document, as processed, to an application
process through a bus of a printed circuit board.

12. (Currently Amended) The method of ~~claim 4~~ claim 9, wherein said
passing step comprises communicating the document, as processed, to a target via a
communications network.

13. (Currently Amended) The method of ~~claim 4~~ claim 9, wherein the target is
a local application process.

RSW9-2001-0077-US1

14. (Currently Amended) The method of claim 4 claim 9, wherein the target is a remote device.

15. (Canceled)

16. (Currently Amended) A system for efficient processing of a document

encoded in a markup language, the system comprising:

a memory provided on a printed circuit board;

a general purpose processor provided on said printed circuit board and being
operatively connected to said memory for executing computer readable code stored in
said memory, said computer readable code configuring said general purpose processor
to perform processing distinct from certain processing of documents encoded in the
markup language; and

a special purpose processor provided as an integrated circuit on said printed
circuit board and being operatively connected to said memory said special purpose
processor being specially configured for certain processing of documents encoded in
the markup language;

wherein said special purpose processor is a dedicated processor The system of
claim 15, and wherein said special purpose processor is configured for parsing
documents encoded in machine-oriented extensible markup language (mXML).

Reply to Office Action dated June 29, 2005

RSW9-2001-0077-US1

17. (Currently Amended) The system of claim 15 16, wherein said special purpose processor is configured for transforming documents encoded in extensible markup language (XML) .

18. (Currently Amended) A system for efficient processing of a document encoded in a markup language, the system comprising:

a memory provided on a printed circuit board;
a general purpose processor provided on said printed circuit board and being
operatively connected to said memory for executing computer readable code stored in
said memory, said computer readable code configuring said general purpose processor
to perform processing distinct from certain processing of documents encoded in the
markup language; and

a special purpose processor provided as an integrated circuit on said printed
circuit board and being operatively connected to said memory said special purpose
processor being specially configured for certain processing of documents encoded in
the markup language;

wherein said special purpose processor is a dedicated processor The system of
claim 15, and wherein said special purpose processor comprises a dedicated integrated
circuit that is specially configured for processing the document.

19. (Previously Presented) The system of claim 18, further comprising:
a telecommunications device operatively connected to said general purpose processor and capable of communicating via a communications network; and

**U.S. Application No. 09/848,828 (Conf. No. 7479)
Reply to Office Action dated June 29, 2005**

RSW9-2001-0077-US1

a first program stored in said memory and executable by said general purpose processor for controlling said special purpose processor to process the document, and for communicating the document, as processed, to a target.

20. (Previously Presented) The system of claim 19, further comprising:
a second program stored in the memory and executable by said general purpose processor for recognizing the document as encoded in the markup language and responsively controlling said special purpose processor to process the document.

21. (Currently Amended) The system of claim 16 18, wherein said special purpose processor comprises a supplemental general purpose processor for executing computer readable code for processing the document.

22. (Previously Presented) The system of claim 21, wherein said computer readable code is configured for processing the document in machine-oriented extensible markup language (mXML).

23. (Currently Amended) The system of claim 18 24, further comprising:
a telecommunications device operatively connected to said general purpose processor and capable of communicating via a communications network; and
a first program stored in said memory and executable by said general purpose processor for controlling said special purpose processor to process the document, and for communicating the document, as processed, to a target.

RSW9-2001-0077-US1

24. (Previously Presented) The system of claim 23, further comprising:
a second program stored in the memory and executable by said general purpose
processor for recognizing the document as encoded in the markup language and
responsively controlling said special purpose processor to process the document.

25-31. (Canceled)
